Our Pre-Primary and Year 1 students are continuing their ‘On The Move’ unit. We had lots of fun playing movement games, such as ‘Musical Statues’ and ‘Moving Mirrors’. We have identified objects in our school environment that can move. We are also learning that for an object to start moving (or stop moving), a force needs to be applied.
Year 2 and 3

Year 2 and 3 are doing very well with their ‘Heating Up’ unit. In a recent lesson, students rotated between nine different stations and observed a range of hot objects. For each object, they needed to decide if it was generating heat or if it had been heated by something else. Students have also been learning about the different ways of creating heat, such as through friction, electricity and burning.

Year 4 and 5

In ‘Package It Better’, Year 4 and 5 tested a range of different materials, with the goal of finding out the properties of each that could make it a good material to use for packaging. Students have also been learning about the environmental impact of using excess packaging, as well as the importance of recycling.
The bright sparks from Year 6 are thriving with their ‘It’s Electrifying’ unit. They now know about electricity moving through a circuit and have figured out how torches and light bulbs work.
